10  Drug testing prices

DNA PATERNITY TESTING AND HAIR DRUG & ALCOHOL TESTING - THE COMPLETE PACKAGE (UPDATED & IMPROVED)

If you are involved in cases that require DNA testing or Hair Drug & Alcohol analysis then look no further as we believe we offer the “best value” service in the UK!

With 3 decades at the forefront of DNA paternity testing, a Hair Drug & Alcohol testing service designed to meet the needs of customers and courts, and as one of the largest forensic laboratories in the UK, Cellmark is a name you can trust.

COMPETITIVE PRICING. Cellmark offers highly competitive prices - in line with Legal Aid guidelines. With no hidden extras!

FREE ADVICE. For you and your clients. Our experienced and professional customer services staff are on hand to assist you every step of the way.

NEXT DAY DNA RELATIONSHIP TESTING SERVICE. Next day results as standard using the most conclusive genetic marker systems across our range of DNA relationship testing services.

HAIR DRUG AND ALCOHOL TESTING IN 3-5 DAYS. One drug, two drugs, three drugs or more? You choose and we’ll deliver a responsive and comprehensive testing and analysis service.

FLEXIBLE COMMUNICATION. Register a case online, by phone, by email or by post. Or contact us using our convenient secure SMS and Chat services.

QUALITY ACCREDITATION. High quality ISO17025 accredited services.

CUSTOMER SUPPORT THROUGHOUT. Taking your case details, organising sampling appointments, keeping you updated on progress, delivering clearly written easy to understand case reports and answering your questions, and with no hidden extra charges!

A COMPLETE PACKAGE & THE “BEST VALUE” SERVICE

FOR MORE INFORMATION CALL 0800 043 4247
Next Day service as standard. Cellmark offers a next day DNA relationship testing service using the latest DNA technology with a minimum of 22 markers analysed.

We manage the process from registration to report including arranging sampling appointments on your behalf if required.

Mouth swab sampling. A simple painless mouth swab taken by a local doctor, nurse or Cellmark trained sampler to ensure that the results will be accepted in court. We can also arrange for samples to be taken in Family Centres, offices and in the client’s own home.

Conclusive results, accepted in UK courts of law. Using a comprehensive marker analysis to provide a probability of paternity in a standard paternity case in excess of 99.999% as standard.

Customer service advice whenever you need it. We have an experienced team of customer services advisors who will provide advice and assistance and guide you through the process.

**For more information call 0800 043 4247**

**Standard 3 person DNA test £324 + VAT**

*Complies with latest MoJ Legal Aid funding guidance*

*a standard 3 person DNA Paternity test = cost of test + cost of report as per LAA guidelines.*

Cellmark has been providing DNA relationship testing for a number of international government customers.

We also undertake a large number of DNA relationship testing cases for private customers who require evidence of a relationship to support their immigration and visa applications, or as part of an appeal against a decision based upon a disputed relationship.

We regularly arrange for samples to be taken from over 40 countries around the world.

In addition to conclusively resolving parent/child relationships DNA testing is helpful in identifying close relationships such as aunt or uncle/niece or nephew, grandparent/grandchild, or brother/sister. DNA testing may also provide useful information to assess half brother/sister relationships.

Our highly trained staff will discuss each case with you to ensure that the most appropriate ‘known’ relatives are tested and that the best DNA technology, from Cellmark’s full forensic capability, is used to achieve the most conclusive result.
Wills and Probate
DNA evidence is becoming an increasingly popular means of resolving probate disputes. While standard relationship cases usually involve testing mouth swab samples, in cases where one of the parties is deceased collecting and analysing samples can be more complicated.

Cellmark has extensive experience of dealing with these matters and liaising with coroners to collect the appropriate samples.

As well as our routine DNA testing processes we have an additional range of ISO17025 accredited DNA tests and forensic techniques which can be used in more complex cases to establish a close or distant familial relationship.

Y-chromosome testing
Y-STR markers on the Y-chromosome can be tested to investigate inheritance down the paternal line. Brothers share the same Y-STR profile as their father, his father and any other direct male relatives.

Mitochondrial sequencing
A small amount of DNA exists within tiny organelles called mitochondria which are found in most cells and are retained in hair shafts and bones. Mitochondrial DNA is inherited down the maternal line and is very useful for investigating relationships stretching back several generations.

Cellmark’s DNA testing service has been accredited by UKAS to the ISO17025 industry laboratory standard for over 15 years. Full details of this and our Hair Drug & Alcohol testing accreditation can be viewed on the UKAS website www.ukas.org. We also hold ISO9001, ISO14001 and ISO27001 accreditations.

The quality of the testing and analysis that Cellmark provides was referenced in the 2007 landmark and public judgement from Deputy High Court Judge Anthony Hayden QC. He highlighted the additional testing that Cellmark undertook on what was an extremely complex case, which ultimately provided the critical evidence to establish the correct familial relationships.

His final comment focusses on the added difficulties inherent in the analysis of more complex familial relationships:

“The experience of this hearing has been to underscore the need for greater clarity in relation to the terms of instruction to DNA experts, particularly where inter-sibling relationships are being analysed, as opposed to relatively straightforward paternity testing. It has also served to be a timely reminder of the importance of identifying the jurisdictional route by which such tests are ordered ... and the need to ensure that suitably approved specialists are instructed.”
Hair Drug & Alcohol testing

Cellmark brings its renowned level of scientific rigour, chain of custody management and industry leading customer service to our comprehensive Hair Drug & Alcohol testing service.

Our laboratory is accredited to ISO/IEC 17025:2005 to test for a wide and expanding range of drugs in hair. Details of Cellmark’s ISO17025 schedule of accreditation can be found at www.ukas.org.

Testing hair samples is a non-invasive method of providing evidence of an individual’s history of drug or alcohol use. It can provide a record over a longer period of time (months rather than days) than all other traditional sample types such as blood, urine or oral fluid. Our service meets the needs of both customers and courts.

You can select a range of hair drug testing analyses to suit your specific requirements.

Including the option of a three month overview of Cannabis and/or Cocaine in line with current court guidance.

Or choose a more detailed month by month analysis of our fully comprehensive panel of over 25 drugs.

CHRONIC EXCESSIVE ALCOHOL CONSUMPTION

We are also able to look for markers of “chronic excessive alcohol consumption” in hair samples, specifically ethyl glucuronide (EtG) and four fatty acid ethyl esters (FAEEs).

If drug analysis has also been requested an additional hair sample must be collected for EtG and FAEE analysis and a minimum of 3cm of head hair is required.

We offer the option to test for EtG on its own or in combination with FAEEs. (The Society of Hair Testing does not recommend that you test FAEEs on their own*). We also offer blood and urine tests which look for other indicators of alcohol consumption.

A clinical assessment by a medical professional should also be considered.

At Cellmark we strongly recommend using hair alcohol tests as part of a complete case review to enable the correct interpretation, judgement and decisions to be made.

* This consensus was adopted on Friday 13th June 2014 during the meeting in Bordeaux, France.
DNA Testing:

Prices for our paternity tests are set out below - prices exclude VAT.

M=mother, F=father, C=child.
